MATRIX

$$\begin{aligned}
 & \begin{matrix} & a & b \\ A = & c & d \\ & e & f \end{matrix} \\
 & A = \begin{pmatrix} a & b & c \\ d & e & f \end{pmatrix} \\
 & B = \begin{bmatrix} 1 & 2 & 3 & 4 \\ 5 & 6 & 0 & 7 \end{bmatrix} \\
 & B = \left\{ \begin{matrix} 1 & 2 & 3 & 4 \\ 5 & 6 & 0 & 7 \end{matrix} \right\} \\
 & C = \begin{vmatrix} 2 & 3 & b & c & v & 3 \\ 8 & 7 & 4 & 2 & 0 & 6 \\ Z & d & b & 9 & h & 2 \\ 1 & 7 & 9 & 9 & h & o \end{vmatrix} \\
 & C = \left\| \begin{matrix} 2 & 3 & b & c & v & 3 \\ 8 & 7 & 4 & 2 & 0 & 6 \\ Z & d & b & 9 & h & 2 \\ 1 & 7 & 9 & 9 & h & o \end{matrix} \right\| \\
 & D = \begin{vmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{vmatrix} \tag{1}
 \end{aligned}$$

for addition or subtraction of two or more 2 just write the 2 equations in between the the opening and closing equation.

$$D = \begin{vmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{vmatrix} + \left\| \begin{matrix} 2 & 3 & b & c & v & 3 \\ 8 & 7 & 4 & 2 & 0 & 6 \\ Z & d & b & 9 & h & 2 \\ 1 & 7 & 9 & 9 & h & o \end{matrix} \right\|$$

$$\begin{aligned}
 2x + y &= 20 \\
 3x - z &= 20
 \end{aligned}$$

$$\begin{aligned}
 2x + y &= 20 \\
 3x - z &= 20
 \end{aligned}$$

$$\begin{aligned}
 2x + y &= 20 \\
 3x - z &= 20
 \end{aligned}$$

WRITING EQUATIONS

There are different ways of writing an equation;

•

$$y = mx + C_1;$$

•

$$y = x^2 + \sqrt{x};$$

•

$$y = x^2 + \sqrt{x};$$

•

$$y = x^2 + \sqrt{x};$$

$$y = \sum_{n=0}^N n^2$$

$$y = \sum_n x_n^2;$$

$$y = \int x dx$$

$$y = \int\limits_{-\infty}^{\infty} x dx$$

$$y = \int x dx$$

$$y = \int_{-\infty}^{\infty} x dx$$

For a piece-wise equation;

$$F_x = \begin{cases} o, & \text{if } x < a; \\ \frac{x-a}{b-a}, & \text{if } a \leq b < a \\ 1, & \text{if } x \geq b \end{cases}$$

$$\phi$$

$$\hat{y} = \tilde{x} + \bar{z}$$

$$\gamma = \alpha + \beta + \pi + \psi$$
