MY SECOND L^AT_EX DOCUMENT

PHILIP THEURI

June 5, 2026

1 TEXT FORMATTING

This will produce *italicized* text.

This will produce **bold** text.

This will produce `typewriter font` text.

This will produce SMALL CAPS text. in order to write a website link in your form add the package hyperref

please visit our website at <https://www.dkut.ac.ke/>.

for the website you can also use href instead of url as shown below

For further information, reach us through our website at our official website

The displayed words our official website will take you to the destined link.

it is also possible to change the font size of the sentences or words as shown below;

We must keep on learning

We must keep on learning

We must keep on learning- It has been made larger compared to the the second one due to the capital l

We must keep on learning

We must keep on learning.

We must keep on learning.

We must keep on learning.

We must keep on learning.

if you want your lines to appear either on the left, right or center then you can use the following commands

this line is centered

this line is left justified

this line is right-justified

this line is right-justified

This line is left justified

this line is centered This line is enlarged

this is to increase the size of our lines

this line is reduced i size
this one too

this has one has been reduced in size to a smaller extent

however it would be advisable to use the begin with and end with format to be able to track
easily where it all went wrong

we used the slash normal size to return back the normal size.

2 document formatting

2.1 title and date

For writing assignments, reports ,then it is advisable to include the date, author and
the title of your document just as we included it at the top.

However its important to note that they should come before the begin document
Choose your title appropriately. For the date; you can type it normally or you can just
use backslash today which changes with each and every time you format your document

2.2 forming sections, subsections and subsection

Example;We can have different titles and subtitles which are formed using the backslash
format

3 Quadratic functions

3.1 vertex form

3.1.1 standard form

3.2 Factored form

if you don't want the numbers to displayed then add an * after the section or subsection
Example;

Contents

4 functions

4.1 vertex form

factored form

we can make this to be a table of contents
